

# The Superiority of the 9000 Series: A Deep Dive into Quality, Durability and Standards

In the world of ergonomic furniture, the quality of the product is paramount. Not just in terms of aesthetics and comfort but also in terms of durability, functionality, and adherence to standards. One such product that stands out in these aspects is Bevco's 9000 Series. With its heavy-duty seamless vinyl, antibacterial and antifungal properties, and high-quality manufacturing standards, the 9000 Series is a testament to superior quality and strength.

## Heavy-Duty Seamless Vinyl

The 9000 Series is crafted with heavy-duty vinyl. Vinyl is known for its superior strength and durability, making it an excellent choice for furniture that is meant to withstand heavy use.

Bevco's 9000 Series can be tailored to fit various work environments including general applications, ESD, Cleanroom, and ESD/Cleanroom. The cleanroom chairs take it a notch higher by offering seamless vinyl – this feature further enhances the durability of the product and makes it easy to clean.

The vinyl used in the 9000 Series is not just durable but also antibacterial and antifungal. It meets the AATCC TM147 and ASTM G21 testing standards, ensuring that the product is safe, hygienic, and resistant to common forms of bacteria and fungi. This quality makes it an ideal choice for environments that require high standards of cleanliness.

## Upholstery Protection with Polypropylene Back Shell

The 9000 Series further strengthens its durability with a polypropylene back shell that protects the upholstery. The back shell is tightly fitted to offer comprehensive protection. This feature ensures longevity by protecting the vulnerable areas of the furniture from wear and tear.

## Quality Assurance with High Standards

High-quality furniture is not just about the use of high-grade materials. Compliance with established standards is a significant factor that determines the quality of the product. The 9000 Series meets the CAL 117, FMVSS 302, and NFPA 260 standards, further cementing its place as a high-quality product.

## Superior Design with a Thick Steel Backbar

The backbone of the 9000 Series is its thick steel backbar. Unlike other products that use low-grade steel hidden behind a plastic cover, Bevco uses a thick steel backbar for the 9000 Series. This design choice adds to the strength and durability of the product while ensuring that the users get a product that is transparent about its quality.

## Non-Marring Hooded Casters

One of the lesser-known features of the 9000 Series is its non-marring hooded casters. These casters are designed to reduce debris accumulation. By preventing dirt and debris from getting stuck, these casters ensure that the furniture moves smoothly while reducing the need for maintenance. This Series is also compatible with stationary mushroom glides if casters are not the best choice for your work environment.

## Comfort with a 20" Chrome Flat Footring

Comfort is as important as durability in furniture. The 9000 Series understands this and offers a 20" chrome flat footring. This footring offers a clean, wide surface for users to rest their feet, adding an element of comfort to the sturdy and durable design.

## The Total Package

In conclusion, the 9000 Series is a product that truly stands out in the realm of furniture. With its high-grade materials, adherence to standards, and thoughtful design, it offers a product that is not just durable and strong but also comfortable and easy to maintain. Whether it's the antibacterial and antifungal vinyl, the protective polypropylene back shell, or the comfortable chrome footring, every aspect of the 9000 Series is designed with the user in mind. The result is a product that is truly superior in every sense of the word.
