To MacDermid Alpha – Alpha Brand Channel Partners

We are writing to inform you of an important update regarding our production timelines for Alpha brand Chemical Products, which include soldering fluxes, thinners and cleaning chemistries. Over the past couple of years, we have been experiencing increases in lead-times for raw materials used in these products. This has been happening for a wide range of materials and from numerous suppliers and been seen more frequently in 2025.

As a result, we have taken the decision to adjust our standard product lead times from 15 Working days to 20 – 25 working days for these products, effective starting Monday July 28<sup>th</sup>.

Please know that the decision to make this change was not made lightly. We are committed to maintaining the quality, consistency, and reliability you have come to expect from us. In light of some supply chain challenges, this adjustment will help us better manage production and ensure timely fulfillment of your orders.

We appreciate your understanding and continued partnership. Our team is actively working on some supply chain initiatives to drive improvement in this area. We do plan to reassess this decision in (90) days to see if we can revert back to, or closer to the prior lead-time.

We thank you in advance for your understanding on this. Please let us know if you have any questions.

Sincerely,

**Kurt Graulich**

*Senior Director of Sales - Americas*
